

Onatola Timilehin Faruq

Blockchain Engineer | Full-Stack dApp Developer | Protocol Engineer

onatolafaruq@gmail.com | github.com/Leihyn | faruukku.vercel.app

Executive Summary

Full-stack blockchain engineer specializing in **DeFi infrastructure**, **prediction markets**, and **privacy protocols**. Production experience across EVM, Solana, Hedera, and Cosmos ecosystems. UHI7 graduate (Uniswap Hook Incubator, 15% acceptance rate) building protocol-level tooling—from Uniswap v4 hooks to cross-chain privacy SDKs. Ships well-documented, open-source projects with comprehensive test coverage.

Core Competencies: DeFi Protocol Integration • Cross-Chain Architecture • Privacy/ZK Development • SDK Development • Smart Contracts • Technical Documentation

Technical Expertise

Smart Contracts: Solidity (Advanced) • Rust/Anchor (Intermediate) • Noir • Clarity • Motoko

Blockchain Networks: Ethereum • Arbitrum • Base • Solana • Hedera • Cosmos/Osmosis • Stacks • Mina

DeFi Protocols: Uniswap v3/v4 • Aave v3 • Curve v1/v2 • GMX • Chainlink (Oracles, VRF, Automation, CCIP)

Frontend: React • Next.js 14 • TypeScript • Ethers.js v6 • Wagmi • Viem

Backend: Node.js • Express • PostgreSQL • Redis • WebSocket • GraphQL

Infrastructure: Foundry • Hardhat • IPFS/Arweave • Docker • GitHub Actions • Tenderly

Security: Slither • Fuzzing • Formal Verification • MEV Protection • Security Auditing

Domain Expertise

DeFi Infrastructure — Uniswap v4 hooks, Aave/Curve/GMX integrations, dynamic fee mechanisms, liquidation engines, interest rate models. *Projects: Sentiment (UHI7), USDCx-Lending, DeFiConnectCredit protocols*

Prediction Markets — Reputation systems, accuracy tracking, soulbound credentials, oracle integration. *Projects: TruthBounty (2nd place Seedify)*

Privacy & ZK — zkSNARKs, zkSTARKs, Noir circuits, stealth addresses (DKSAP), privacy pools, timing decorrelation. *Projects: OmniSwap SDK, Nocturne, OmniShield Wallet*

Cross-Chain — HTLC atomic swaps, bridge protocols, multi-chain wallets, chain-agnostic SDKs. *Projects: OmniSwap SDK, Cybria Bridge, OmniShield Wallet*

Professional Experience

Junior Blockchain Engineer | DeFiConnectCredit | Remote | Jan 2025 – Present

- Architected modular smart contract systems integrating Aave v3, Uniswap v3, GMX perpetuals, and Curve pools with 99.9% uptime

- Implemented cross-chain asset management reducing bridging latency by 40% through optimized validator infrastructure
- Established Foundry testing framework with 95%+ coverage, identifying and resolving 3 critical vulnerabilities pre-deployment
- Reduced transaction costs by 35% through assembly optimization and storage pattern improvements
- Built deployment automation suite cutting deployment time from 2 hours to 15 minutes

Blockchain Development Engineer (Intern) | DeFiConnectCredit | Remote | Jun 2024 – Dec 2024

- Contributed to core lending protocol implementing collateral management and liquidation mechanisms
 - Conducted security reviews on 15+ contracts, identifying reentrancy, front-running, and oracle manipulation vulnerabilities
 - Deployed ERC721 incentive system with Merkle tree proofs for 500+ users
 - Developed test suites achieving 90%+ coverage including edge case and stress testing
-

Featured Projects

OmniSwap SDK

Cross-Chain Swap SDK | TypeScript | github.com/Leihyn/omniswap-sdk

Production-grade SDK enabling atomic swaps across 6 heterogeneous blockchains.

- Architected HTLC-based swap protocol with automated refund management
- Built chain-specific adapters for Zcash, Osmosis, Mina, Aztec, Miden, Fhenix
- Implemented robust error handling with typed errors and exponential backoff retry logic
- Created 70KB+ documentation with API reference, tutorials, and 5 working examples
- Set up CI/CD pipeline with GitHub Actions for automated testing

Sentiment – Uniswap v4 Dynamic Fee Hook

UHI7 Incubator Capstone | Solidity | github.com/Leihyn/Sentiment

Dynamic fee hook for Uniswap v4 implementing counter-cyclical fees based on market sentiment.

- Built fee adjustment algorithm (0.25%–0.44%) responding to real-time market conditions
- Implemented multi-keeper architecture using Chainlink Automation + Gelato for redundancy
- Achieved <30k gas overhead per swap through optimization
- Graduated from UHI7 (15% acceptance rate) with Uniswap Labs collaboration

Comic Pad – NFT Marketplace

Hedera Hashgraph | Production | github.com/Leihyn/comicPad

Full-stack NFT publishing platform with advanced tokenization models.

- Solo-built complete marketplace from smart contracts to frontend
- Architected HTS token system supporting 3 tokenization models: full-issue, paginated, collection series
- Built React/Next.js 14 PWA with HashPack/Blade/MetaMask wallet support
- Created WebSocket server delivering real-time updates to 1K+ concurrent users (<50ms latency)
- Implemented hybrid IPFS/Arweave storage with 99.9% availability and automatic failover

- Built advanced features: Dutch/English auctions, royalty distribution, dynamic pricing, token-gated content

OmniShield Wallet

Multi-Chain HD Wallet | TypeScript | github.com/Leihyn/omnishield-wallet

HD wallet supporting 6 blockchains with real-time balance fetching.

- Implemented BIP-39/32/44 standard key derivation across multiple chain types
- Built chain-specific adapters with unified interface for balance queries and transactions
- Created React web interface and React Native (Expo) mobile app
- Integrated with OmniSwap SDK for cross-chain swap functionality

TruthBounty – Reputation Protocol (2nd Place, Seedify Hackathon)

BNB Chain | Solidity/Next.js | github.com/Leihyn/TruthBounty

Decentralized reputation system for prediction markets. **2nd place at Seedify Prediction Market Hackathon.**

- Built accuracy tracking across PancakeSwap & Polymarket predictions
- Implemented soulbound NFT credentials for on-chain reputation
- Created leaderboard system with TruthScore algorithm
- Built with Next.js, TypeScript, Solidity, Wagmi

BankOfCronos – AI-Powered DeFi

Cronos Chain | github.com/Leihyn/BankOfCronos

AI-powered DeFi protocol enabling autonomous interest rate hedging.

- Designed smart contract positions with automated hedging strategies
- Implemented x402 programmatic payments for premium feature monetization

USDCx-Lending

Stacks Blockchain | Clarity | github.com/Leihyn/USDCx-Lending

Lending protocol with collateralized borrowing on Stacks.

- Built interest rate models and liquidation mechanics in Clarity
- Implemented USDC-backed loan system with dynamic collateral requirements

Additional Projects

Project	Tech	Description
CelestiFi	TypeScript	Whale activity tracking for Somnia Network with sub-second alerts
Nocturne	Noir/Solana	Private payments using ZK proofs and stealth addresses
TerraCred	Hedera	Real estate DeFi with property-backed collateralization
Cybria Bridge	EVM/Python	Cross-chain bridge with 3-of-5 multi-sig validators

Glass Wallet Comic	React	Interactive educational content on blockchain privacy
-----------------------	-------	---

Achievements & Certifications

2nd Place – Seedify Prediction Market Hackathon *TruthBounty: Decentralized reputation protocol for prediction markets*

Mina Foundation Content Creation Track Winner – Zypherpunk Hackathon *Technical content creation for developer audiences*

Uniswap Hook Incubator (UHI7) – Graduate 15% acceptance rate • Production-ready hook development • Uniswap Labs collaboration

Cyfrin Updraft – DeFi Security & Protocol Engineering (Completed) *Aave v3 • Uniswap v3/v4 • GMX • Curve v1/v2 • Smart Contract Security*

Hashgraph Developer Certification – The Hashgraph Association *HTS/HCS Development • Mirror Node Integration • Production Deployment*

School of Solana – Ackee Blockchain (Ongoing) *Rust/Anchor Framework • Solana Program Development*

Education

Bachelor of Science in Physiotherapy University of Ibadan, College of Medicine | Graduated 2024

Languages

Human: English (Native) • Spanish (Conversational)

Programming: Solidity • TypeScript • Rust • Clarity • Noir

Open Source

- **11 public repositories** on GitHub with documentation, CI/CD, and examples
 - Active contributor with focus on DeFi tooling and cross-chain infrastructure
 - All major projects include README, CHANGELOG, and CONTRIBUTING guides
